

Port of Genoa security system contract awarded

27 August 2021

The tender to upgrade and reinforce security infrastructure in the Port of Genoa has been contracted to R.T.I. Infratech Consorzio Stabile.

The new system is set to overhaul the current 4km of port perimeter fencing and 14 gates into the Port of Genoa to maintain a high level of security in Italy's leading port. The project entails the introduction of both tangible and intangible elements, namely, a review and upgrade of monitoring and control procedures of vehicles and pedestrians across the port gates to prevent congestion and to guarantee the strict standards imposed by the European Commission in terms of port security.
